

RULES AND SAFETY PROCEDURES

BUILDING EVACUATION

The building's general evacuation communication is carried out through a continuous audible alarm, followed by voice communication. The audible alarm can be activated in the emergency buttons which are indicated in the emergency plans. In case of alarm:

In case of alarm:

- Keep calm.
- Leave immediately your workplace or classroom, ensuring that the equipment under your responsibility is switched off. Close the gas network, natural gas and gas bottles. Do not delay collecting personal belongings. Close doors and windows.
- Use the stairs, never the elevator. On the stairs, let people from the floors below pass alternately.
- Do not stop at the exit door of the building. Head to the meeting point  and remain there until given permission to return to the building.

FIRE

If you witness a fire, proceed as follows:

- Press the emergency button or call the internal emergency number - #115 ou 912233377.
- If the fire is small use the closest fire extinguisher, but don't take unnecessary risks.
- If the use of one fire extinguisher is not enough leave the area.
- Head to the meeting point.

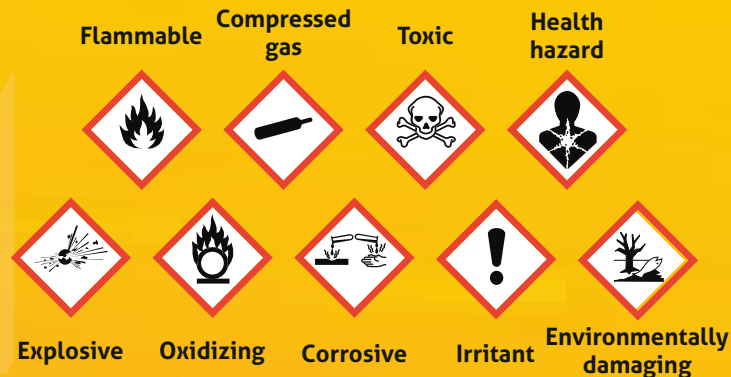

GAS LEAK

In the event of a gas leak (natural gas, DEQ network gas or gas bottle), do the following:

- **Natural gas and DEQ network gas:** Close the exit valves and the shutoff valve near the laboratory entrance. If necessary, call the laboratory gases cut technician through #115)
- **Gas bottles:** Close the bottle valve.
- If it's a flammable gas, do not switch on any electrical device or light.
- Open the windows and abandon the laboratory.
- Contact the DEQ safety technician and the Technical and Maintenance Services (STM).

CHEMICALS MANIPULATION AND STORAGE

- If you transfer chemicals to other containers, you should label them, identifying the chemical and the associated risks.
- Respect the laboratory's chemicals organization and don't change their location.
- Substances or mixtures that are dangerous, potentially explosive, toxic or whose dangerousness is unknown should be handled in the fume hood.

GENERAL SAFETY RULES

- Familiarize yourself with the location and the operation mode of the protection equipment (fire extinguisher, eye washer, first aid kit, telephone, etc). In case of accident you will not have time for that.
- Check the emergency plans in order to know the evacuation route.
- Before handling any substance or mixture read the safety data sheet.
- Do not take any risk behavior in the laboratory (working alone, running, playing, eating, drinking, etc.).
- Inform DEQ's safety team of the occurrence of accidents, even if their help was not necessary.

INDIVIDUAL SAFETY EQUIPMENT

- Always use the protective equipment recommended for each work (lab coat, gloves, safety glasses, etc.).
- Avoid using the protective equipment outside the laboratory.
- Wear closed, resistant and waterproof shoes. The sole should preferably be shallow and anti-slip.
- Long hair should be held.

Chemical residues should not be disposed in the sewage network or in the normal waste.

They must be stored and labeled in the laboratory where they are produced until EcoEUP collects them every six months.

EQUIPMENT

GENERAL SAFETY EQUIPMENT

DEQ laboratories have several equipment to deal with emergencies such as fire, chemical and personal accidents:

Emergency shower | Emergency eye washer

Fire extinguisher | Fire blanket | Telephone

In addition, class laboratories have:

1st aid kit | Panoramic protection mask | Chemical safety data sheets

INDIVIDUAL PROTECTION EQUIPMENT

The use of the following personal protection equipment is mandatory in most laboratories:

Safety technician and first aider
Lab coat | Gloves | Safety glasses

SAFETY EQUIPMENT AVAILABLE AT ALL TIME

DEQ offers a cabinet, located on floor -1, with restricted access to DEQ users, continuously (24 hours / day, 365 days / year), with the following safety equipment:

1st aid kit | Gas detector | Panoramic protection mask
Spill kit | Protection gloves, boots, pants and jacket
Helmet | Spotlight | Signal cones

Attention! The panoramic protection mask provided in the safety cabinet protects from a variety of chemicals (organic and inorganic vapors - boiling point above 65 °C - acid gases, ammonia and its derivatives, particles). It does not provide protection in areas with insufficient oxygen, as in the case of a significant gas leak.
